CZOCHRA, M.

4254. Estimation of the activity of pancreas in gastric and duodenal ulceration both before and following gastric resection. M. Czochra (*Ann. Univ. M. Curie-Skłodowska*, 1954, 9: 225—234 (Univ. M. Curie-Skłodowska, Lublin, Poland).—The activity of the pancreas in cases with gastric ulceration both before and after partial gastric resection was estimated by measuring the diastase level in the blood. With both gastric and duodenal ulceration the pancreatic activity was disturbed in about 20% cases, it was very noticeable when pyloric stenosis was present. A partial resection of the stomach necessitated by these disorders, exerted a beneficial effect on pancreatic activity. E. M. RATTENBURY.

Title : The Pharmacologic Effect of Acetylized Derivatives of Morphine.

Orig Pub: Kiserl. orvostud., 1958, 10, No. 1, 25-35

Abstract: The DL_{50} of 14-acetoxydihydrocodeinonenolacetate (I) is 650 mg/kg in mice, 120 mg/kg in rabbits; the DL_{503} of acetoxydihydromorphinonenolacetate (II) is correspondingly 40 and 12 mg/kg. I and II possess a considerable analgestic action (increase the threshold of pain sensitivity by 100%). The antitussive effect of II manifests itself in a dose of 0.4 mg/kg; of I in a dose of

CZONICZER, G.

EXCERPTA MEDICA Sec 7 Vol.12/9 Pediatrics Sep 58

2382. THE ROLE OF SPONTANEOUS FLUCTUATIONS OF THE P-R INTERVAL IN THE DIAGNOSIS OF RHEUMATIC CARDITIS - Über die Rolle der 'Spontan-Schwankungen' der Überleitungszeit (PQ-Zeit) in der Diagnose der rheumatischen Karditis - Czoniczer G. and Szabo R. 2. Med. Klin., Univ. Szeged - Z. KREISL. -FORSCH. 1957, 46/19-20 (764-773) Graphs 3 Tables 2

The authors examined the P-R intervals of 146 patients, recorded at different hours within 3 days. In healthy individuals small changes of the P-R interval have been observed. These, however, have been relatively frequent in patients suffering from rheumatic carditis, in the acute stage as well as in the postcarditic period. The authors consider these changes due to a lability of the vegetative nervous system together with the presence of certain organic changes. The amplitude of the T-wave also has been observed. There were relatively big changes (more than 2 mm.) in healthy individuals as well as in patients with organic heart disease or vegetative nervous disorders.

Wenger - Vienna (XVIII, 6, 7, 20)

AUTHOR: Czop, Z.

TITLE: ~~Acoustic~~ interference compensator

PERIODICAL: Referativnyy zhurnal. Avtomatika i radioelektronika, no. 5, 1962, abstract 5-7-95 sh (Polish patent specification, class 21 a, 76, no. 44409, 5.5.1961)

TEXT: Two microphones, 1.5 m apart, are used in the proposed system of compensation; one of the microphones is connected to the grid of the first electrode system of a double triode, and the other microphone is connected to the anode of the second system; anodes of both systems are directly connected. In consequence, electric oscillations from an arbitrary source, 2 m distant from the microphones, appear in anti-phase on the anode load and counteract one another; only the signal from a source close to one microphone appears at the amplifier output. [Abstractor's note: Complete translation].

Vascularization of the respiratory surfaces in Triturus cristatus Laur FOLIA MORPH. (Warszawa) 1954, 5/2 (93-104) Tables 4 Illus. 7

Calculation of the total length of the blood capillaries of skin, mouth cavity and lungs. In one kg. of the body-weight there are 11.666 m. of the skin capillaries, 3.687 m. of lung capillaries and 0.487 m. of the capillaries of the mouth cavity.

Accordingly the chief part of the gaseous exchange of the animal is carried out by the skin, as its blood capillaries form 73.7% of the total length of capillaries of the respiratory surfaces whereas lung capillaries amount to 23.3% and those of the mouth-cavity only to 3% of the total. 7287. CZORTKOWER E. and KNAPIK Z. I Klin. Chir. A.M. i Chorób Wewn. A.M., Wrocław. *Dwa przypadki ran kłutych serca (Analiza elektrokardiograficzna i rentgenologiczna). Two cases of stab-wound of the heart. (Electrocardiographic and radiologic analysis) PRZEGL. LEK. 1955, 11/12 (366-375) Graphs 11 Tables 1 Illus. 9

Two cases of stab-wound of the right ventricle were described. Both were successfully operated on and followed-up by ECG examinations until recovery. In both cases ECG signs of diffuse superficial heart muscle lesion, similar to those seen in pericarditis, were present. ECG changes indicating a focal injury of the heart muscle were not observed.

AUTHORS: Liniecki, Julian, Czosnowska, Wanda and Karniewicz, Wiesława

TITLE: ^{90}Sr contamination of milk, cattle and human bones in Poland in 1959

PERIODICAL: Nukleonika, v. 6, no. 1, 1961, 57-64

TEXT: This is a continuation of an investigation begun in 1958 (Ref. 1: Liniecki, J., Czosnowska, W and Pietrzak, Z: Nukleonika, 5, 301 (1960) using the same analytical prcedures. Cattle bones were sampled both from the lowland districts (Lublin, Warsaw, Danzig, Bydgoszcz and Poznań) and the highlands (Zakopane, Limanowa, Jasło and Pszczyna) the latter being subject to heavy annual rainfall. Powdered milk came from factories situated in the lowlands (Krośniewice, Siedlce, Rypin, Słupsk and Września) and a few liquid samples were collected in the Cracow area. Human bones were obtained from the Pathological Anatomy Department and the Children's Hospital of the Medical School at Łodź (from the deceased inhabitants of that

^{90}Sr contamination of milk...

district) and from the Children's Hospital at Cracow. Anterior parts of vertebrae, femurs and tibias were tested. The ^{90}Sr content of cattle bones for 1959 are tabulated, and a comparison with figures obtained in 1958, for the lowlands cattle is also illustrated. It is shown that the level of contamination is greater in the highland cattle and decreases with increasing age of the animal, although considerable variations were found. The highest results approximated to 100 $\mu\mu$c/g Ca, the maximum permissible concentration for human population. Further tests on cattle and sheep are planned. The average ^{90}Sr content in powdered milk samples was 7.2 $\pm$ 1.0 $\mu\mu$c/g Ca, the values varying between 3.2 and 14.8, and the corresponding figure for liquid milk was found to be 9.9 (3.6 - 13.3). Seasonal variations of contamination level in milk are shown and future work in this direction is briefly mentioned. Concentrations of ^{90}Sr in human bones show that the ^{90}Sr content is highest in the 0 - 5 age group and decreases with age, becoming fairly constant in persons over 20. This is in agreement with Western work. Results also for the 0 - 20 age groups are similar to those of Western observers, but the ^{90}Sr levels in adult bones are higher than the values measured by Western

^{90}Sr contamination of milk...

authors. The hypothesis that ^{90}Sr is distributed non-uniformly in the vertebrae has been confirmed by measuring the strontium in the spongy, anterior and the more compact parts of the bone. The average skeletal contamination was found to be 0.3 $\mu\mu$c/g Ca. This agrees well with the value of 0.31 obtained by Western sources. The rate of accumulation of ^{90}Sr in bone is briefly mentioned. The measured non-uniformity of skeletal distribution of ^{90}Sr which is important in evaluating potential hazard to internal organs, appears to be greater than that found by J.L. Kulp. A.R. Schulert and E.J. Hodges (Ref. 15: Science 132, 448 (1960)). The authors express their gratitude to Miss H. Furmanck for technical assistance. There are 5 figures, 3 tables and 15 references: 1 Soviet-bloc and 14 non-Soviet-bloc. The references to the English-language publications read as follows: W.R. Eckelmann, J.L. Kulp, A.R. Schulert: Science 127, 266 (1958); M. Eisenbud: Science 130, 76 (1959); A.R. Schulert, E.J. Hodges, E.S. Lenhoff, J.L. Kulp: Health Phys. 2, 62 (1959); J.L. Kulp, A.R. Schulert, E.J. Hodges: Science 132, 448 (1960).
